## Cause:

The Current Calendar setting is set to the wrong year.

## Solution:

From the **Counterpoint Main Menu** browse to **Setup > System > Company**.

In the **Current calendar** field near the top right in the **Dates section**, enter or lookup and select the current year's calendar.\*

Click Save in the toolbar.

If the current year calendar is not available, you will first need to browse to Setup / System / Calendar and create it. Please see the [Counterpoint Online Help for information on how to configure this.](#)
