Add a logo to .XML receipts

Summary:

How to add an image or logo to an .XML receipt. Steps to print an image on an .XML receipt/invoice

Solution:

When printing graphics onto an OPOS receipt there is a different setup than when printing using a Crystal receipt (RPT form).

To print a bitmap graphic for FormFile.xml (for example), create a file named FormFile.bmp in the **Top-Level/ Company/ Forms** directory. The name of the bitmap file must be the same as the form name.

The XML form does not need to be edited. CounterPoint SQL will automatically print the image file first and then print the XML file.

Customizations must be enabled in the user preferences.

Note: When the form is previewed the image will be seen, but when printing from the preview, the image will not printed. The procedure used to print the image is only called once when printing the XML form.
