Error: Card expired

Summary:

Error: Card expired though the expiration date is in the future

Cause:

The 100 year period set by the **Century Offset Years** value does not include the expiration year.

Solution:

In **Setup / System / Company** edit the **Century Offset Years.** Enter the number of years which Counterpoint SQL will subtract from the current year to calculate the starting year for the company's century range.

For example, when the current year is 2014 and 90 is entered into this field, the century range will begin in 1924 (2012 minus 90) and extend through 2023.
