

# Importing Gridded Items through Data Interchange

## Summary:

Importing Gridded Items through Data Interchange

## Solution:

When importing new gridded items through Data Interchange there are four tables which **must** have records added;

**IM\_ITEM**  
**IM\_GRID\_DIM\_1**  
**IM\_GRID\_DIM\_2**  
**IM\_GRID\_DIM\_3**

Once records are added for each new gridded item run the **Create Inventory** utility (under **Inventory > Utilities**). This utility creates inventory records for the new items, including an inventory record for each grid dimension.

**NCR Counterpoint Support** recommends creating a gridded item in the software and using its record in the above four files as a template for the new gridded items to be imported.
