Inventory display options in Ticket Entry - Show Quantity Available

Summary:

How to show the quantity available column in an item lookup in Ticket Entry.

Inventory display options in Ticket Entry

Solution:

The quantity available is stored in the inventory table for each location. The following steps will only work in Point of Sale, since while in Ticket Entry a default location is set.

- In **Setup/ System/ Workgroups** on the Identification tab change the **Item Lookup Shows** setting to **Item and Inventory Data**.

The other available settings for the **Item Lookup Shows** setting are:

> The **Item data** setting does not allow quantity information to be displayed on an Item Lookup.
> The **Item and inventory data** setting displays the Qty available on an Item LookUp.
> The **Item data with inventory totals** setting displays the Item qty available on an Item LookUp.
> The **Both** setting displays both the Qty available and the Item qty available on an Item LookUp.
