Rights granted by selecting 'Point of Sale Manager' on a User's record

Summary:

Point of Sale Manager rights

What is the difference between a Point of Sale manager and Non-Point of Sale managers.

Rights given with the 'Point of Sale Manager' option selected (in Setup / System / Users)

Solution:

- Point of sale managers can do the following:
    - Perform the security overrides for which they are authorized for other users in Ticket Entry and Touchscreen Ticket Entry.

    - Can use the **Override** button to enter their user ID and password.

      For example: If the Point of Sale manager has permission to override prices then the user may then change the price of the line item for that line item only.

- Users who are not Point of Sale Managers can only perform security overrides for themselves.
    - For example: A user without the permission to change the price of a line item receives a permission error.
