

NCR Secure Pay P2PE MSR and Non-Financial Cards

Article Number: 681 | Rating: Unrated | Last Updated: Wed, Aug 9, 2017 at 11:45 AM

Summary: NCR Secure Pay P2PE MSR and Non-Financial Cards **Solution:** Magnetic Stripe Readers (MSRs) injected with NCR Secure Pay Point-to-Point Encryption (P2PE) keys will not encrypt non-financial card data, and therefore can be used to read various non-financial cards, including NCR Counterpoint Gift Cards and Loyalty MSR Cards. This is true for the following hardware devices injected with NCR Secure Pay P2PE keys: MagTek DynaMag External USB P2PE MSR Ingenico iSC250 P2PE Signature Capture devices (Cannot be used for User Login MSR / Employee ID Cards)** NCR RealPOS XR7 "all-in-one" POS terminals Regarding the format that identifies a card as a financial card: After the track 1 sentinel, there is a 1 character format code. For financial cards, that format code is "B". Any other character in that location will cause the card to be treated as a non-financial card, and the device will not encrypt the read. **User Login MSR cards cannot be used on the ISC250 (P2PE or non-P2PE). **Employee ID Cards will work with the P2PE MSR built into the XR7.
